My role is a system engineer with strong knowledge in web development and focus on frontend development. My passion has always been computers and to create things, therefore system development suits me like a hand in a glove.

During my years as a developer, I have learned that being a step ahead can be the difference between succeeding and failing. To me it is important to surround myself around people with different perspectives and experiences towards everything from code to knowledge outside of working life. I believe that a group always can achieve more success than one lonely person.

With several years as an elite handball player, team spirit has always been something I highly value and that the most important thing is that the group succeeds. I describe myself as helpful, unpretentious and open to suggestions and improvements.

EMPLOYMENTS

Trustly   Software Engineer
                                               Mar 2021 - Ongoing

I work in a team with responsibility for everything related to
the Checkout. My responsibility, together with the team, is
maintenance, support, new features and distribution of the
Checkout.

At Trustly, I have learned what it means to be responsible to a
product used by several thousand users per day. This means
me and my team has to work close together and is dependent
on communication, helpfulness and being transparent.

Forefront Consulting   Web developer
                                               Jan 2020 - Mar 2021

I worked as a consultant, mostly at the client, focusing on
frontend development in 5 different contracts.

In these assignments, I usually had a role with sole
responsibility for the front end parts of different types of
products working directly with the customer.

A couple of examples of what I learned was to be one step
ahead and be able to argue for the product's best from my, the
frontend, perspective.

Frost Experience   Software developer
                                               Oct 2016 - Jan 2020

Worked as an in-house consultant with several different
projects. The projects varied in the size of the team,
technologies, markets and my own responsibility to the
product and the stakeholders.

This taught me how to handle several different internal
situations but also contact with the customer, product owners
and stakeholders. I also had a role as a mentor during
different periods.

In addition, I learned to deal with big time differences and
other challenges when working in a remote team.

TECHNIQUES

Javascript/ES6   React   React Hooks   HTML5   CSS3

Styled components   Sass/Less   Agile methods

5/5

Jest   React-testing-library   Angular   Node.js   Redux   MobX

Typescript   Javascript/ES5   CI/CD   Git   TDD   Babel

Webpack   Single Page Application   Server Side Rendering   npm

yarn   Linux   Docker   Microservices

4/5

React Native   MongoDB   Next.js   Gulp   Bootstrap   MVC

Jenkins CI   jQuery   Angular 1   Azure Devops   GraphQL

Grafana   NginX   Splunk   Github Actions   Istio   Kubernetes
