My name is Richard I'm born and raised in Stockholm, Sweden. I'm a former elite athlete (team sports) and a senior software engineer with solid knowledge in web development with a focus on frontend development. Besides sports my passion has always been computers and creating things.

During my years working professionally I have developed an interest in business, an understanding of what should be prioritized and an ability to see the bigger picture. I believe that decisions should be simple and iterative to be able to move fast and data driven to truly know what the user wants.

I appreciate teamwork and surrounding myself with people with different perspectives and experiences. I have experience in mentoring and hope to be a future leader. I describe myself as helpful, unpretentious and easy-going.

EMPLOYMENTS

Annevo

I'm currently working as a consultant and have since my starting days at Annevo worked with a vital high-security project for one of the largest telecommunications companies in the Nordic and Baltic regions.

Software Engineer
Sep 2022 - Ongoing

Trustly

I worked in a team with ownership of everything related to the end user checkout and all the supporting services needed for it. My responsibility, together with the team was, maintenance, support, new features, and distribution of the checkout and all supporting services.

At Trustly, I learned what it means to be responsible for a product used by several thousand users and transactions per day. This means that the team had to work closely together and was dependent on communication, helpfulness, and transparency as we had the ultimate responsibility that the checkout was up and running without crashes or bugs at all times.

Software Engineer
Mar 2021 - Sep 2022

Forefront Consulting

I worked as a consultant, mostly at the client, focusing on frontend development in 5 different contracts.

In these assignments, I usually had a role with sole responsibility for the frontend parts of different types of products working directly with the customer.

A couple of examples of what I learned was to be one step ahead and be able to argue for the product's best from my, the frontend, perspective.

Software Developer
Jan 2020 - Mar 2021

Frost Experience

Worked as an in-house consultant with several different projects. The projects varied in the size of the team, technologies, markets and my own responsibility to the product and the stakeholders.

This taught me how to handle several different internal situations but also direct contact with the customer, product owners and stakeholders. I also had a role as a mentor during different periods.

In addition, I learned to deal with big time differences and other natural challenges that arise when working within remote teams.

Software Developer
Oct 2016 - Jan 2020
